Reserve Capacity @ 75A	225 min	

Operational temperature range: -20°C to + 55°C (always keep the battery charged at least 60% at temperatures below 0°C)

Charging Instructions at 25°C		
Daily charge	$7.40V \pm 0.05V$	
Float charge	6.60V	
Equalize charge	7.70V ± 0.05V	

\* Do not install or charge batteries in non-ventilated premises.
\* The charging is of special importance because both over and under charging will severely limit the life of the batteries. If the batteries will stay for an extended period without being used please ensure they are routinely checked, cleaned and fully charged before being stored.

## Battery temperature adjustment:

Reduce the voltage by 0.028V per cell for every 10°C above 25°C, increase the voltage by 0.028V per cell for every 10°C below 25°C. Deep cycle batteries need to be equalized periodically. Actively used batteries should be equalized at least twice per year.
